innovation explored innovation delivered

Our card machines provide clients with an ultimate “always-connected” payment technology, with dual connectivity & Wi-Fi machines to keep you on the go.

Integrated Payment Solutions

Our Integrated payment solutions are well-suited for businesses with high transaction volumes, complex inventory management needs, and a desire for comprehensive reporting and analysis.

Benefits:

- Streamlines the payment process by eliminating the need for separate systems or manual data entry.
- Reduces errors and improves efficiency through automatically synced data.
- Provides detailed sales & inventory reports for better insights.
- Enhances experience with fast seamless transactions.

Pay-At-Table

This solution provides a more streamlined and efficient dining experience, the device acts as a “mobile POS” allowing customers to settle their bills directly at their tables.

Benefits:

- Reduces waiting times and eliminates the need to leave the table for payment.
- Integrates with our Point-of-Sale
- Its portable and allows you to view the menu and place orders directly on the device.
- Opportunity for additional upselling/marketing at the table.

Standalone Card Machines

These independent devices are solely dedicated to processing card transactions. They are very useful as secondary or backup devices for businesses already using integrated solutions, or for mobile businesses that require portable payment terminals.

Benefits:

- Quick and easy to set up and use, with minimal integration requirements.
- Can be used as backup in case of system failures or network issues.

Works well with:
